

EXTEND THE LIFE OF YOUR EQUIPMENT

CYBERPOWER BATTERY REFRESH

On average, UPS batteries have a lifespan of three-to-five years but can be shortened by frequent discharge/charge cycles. A quick check on your UPS batteries can ensure your servers and networking equipment has the power and surge protection needed to keep productivity high and mission critical data protected. What's more, replacing your batteries is a low cost measure you can do to extend the life of your UPS and office equipment.

If it turns out you do need a replacement battery or UPS, call on CyberPower for award winning power protection products. The CyberPower advantages include:

- A NO RISK demo program
- Special volume and Gov/Ed discounts
- FREE power audits
- Industry leading product warranties and connected equipment guarantees

Is it time to replace your UPS battery? Consider the following:

- Do you currently have power protection on-site?
- Do you know the age of your current UPS system/battery backup?
- Does your UPS system have a battery test feature?
- When is the last time you tested your UPS system?
- Have you noticed your UPS system is lasting for less time on battery power than it used to?
- Have you added or changed any equipment that is connected to your UPS?
- Is your UPS system undersized for the load of your connected equipment? If so, the battery life of your UPS may be shortened and may need to be replaced sooner than normal.
